

Fellowship in Laser Dentistry for Dental Hygienists and Therapists

13 hours 2 days Next start date: 15 January 2019

Overview

This two-day CPD course is designed for dental hygienists and therapists who want to **understand and gain experience in using laser therapy** in their daily practice.

It will give you a **sound knowledge of, and experience with, laser-tissue interaction**.

You'll **learn to use laser therapy to benefit your patients' experiences and outcomes**.

The course aims to provide **evidence-based core knowledge in laser use** for your daily practice. It will also help you **refine your practical skills**.

You'll **earn 13 hours of verifiable CPD** (continuing professional development).

The course is run at the [UCL Eastman Dental Institute](#) in London in collaboration with the University of Genoa.

Course content

The two modules cover the following areas.

Module one

- What is laser? How does it work? Types of lasers used in dentistry
- Laser operating parameters
- Laser health and safety
- Laser-assisted restorative therapy
- Practical session: laser-hard tissue interaction and its applications on pigs heads and extracted teeth

Module two

Cost: £995 *

*Concessions may be available

- Laser use in periodontology
- Laser use in implantology and peri-implantitis related to hygienists' and therapists' roles
- Selective criteria for choosing patients
- Treatment modalities and laser protocols
- Clinical cases: delegates case presentations and forum for discussion
- Practical session: laser soft tissue interaction

Who this course is for

This course is perfect for dental hygienists and therapists who are keen to optimise their skills in using laser therapy to benefit patients' experiences and outcomes.

This course is structured to benefit hygienists and therapists without laser experience in the field of periodontology and implantology.

Some experience of using lasers is desirable. However, this isn't necessary in order for you to benefit from this enhanced level of education.

Learning outcomes

By the end of the course you should:

- have improved your evidence-based core knowledge of laser use in dentistry and refined your practical skills
- have a clear clinical understanding in using lasers safely in your daily work
- be familiar with the clinical applications of different wavelengths related to periodontology, peri-implantitis and restorative dentistry.

Structure, teaching and assessment

The course consists of **two modules over two consecutive days** (running from approximately 9:30am to 5pm each day).

Course content will be delivered through modular didactic and practical sessions.

There will be clinical case presentations for participants who are already laser users.

Cost

The standard fee is £995. This is payable in instalments before the start of the course. Please contact Alison on edi.cpd@ucl.ac.uk for more information.

CPD points and certificate

On successful completion of the course you'll gain **13 hours of verifiable CPD**, plus a certificate of attendance.

Quality controls

All Eastman teachers are experienced professionals. You'll be asked to submit written feedback via a questionnaire at the end of the course, which is used to monitor the course's quality of teaching and value for money.
